

Study Registration: NCT00461539

Title

Reducing Health Risk Behavior and Improving Health in Adolescent Depression

Brief Summary

This study will determine the effectiveness of a health education intervention in reducing health risk behavior and improving health in adolescents with depression.

Status: COMPLETED

Phase: PHASE1, PHASE2

Primary Outcomes

1. Composite health risk behavior score

Secondary Outcomes

1. Composite International Diagnostic Interview (CIDI) depression diagnosis

Eligibility Criteria

Inclusion Criteria:

- * CIDI diagnosis of major depression or probable depression based on youth self report

Exclusion Criteria:

- * Lacks contact information (e.g., address, telephone number)

Planned Enrollment: 217

Study Arms

- **2** (ACTIVE_COMPARATOR): Participants will receive treatment as usual

Interventions

- **Treatment as usual** (OTHER): Those participants receiving standard care will be referred to special programs as needed to reduce their involvement in risky health behaviors.
